

**Simply Secure**

**Computer Security Solutions**

## Who We Are and What We Do

### Vision

Our vision is to be the world's most dynamic computer security company, creating easy to use, efficient and reliable solutions, essential to a better and safer computing environment.

### Mission

Our mission is to be an international leader in the research, development and marketing of technologically advanced, high-quality computer security solutions.

### Core Values

- **Customer Orientation**

We are focused on being responsive to customer needs in all our activities.

- **Innovation**

We are committed to the continuous improvement of our products and services through research and development and successful commercialization strategies.

- **Quality and Service**

We strive to exceed the expectations of our customers and partners in the quality of products and services we deliver.

- **Profitability**

We strive to operate efficiently and cost-effectively, to the benefit of our customers and all our stakeholders.

- **Teamwork**

We believe that cooperation and support among individuals, departments and companies is central to our ability to reach goals.

FRISK Software International is a privately owned, global software development company founded in 1993 with its headquarters in Reykjavik, Iceland. As well as being a world-leader in antivirus technology and computer security, FRISK Software develops spell-checker software for the Icelandic language and software applications for genealogists.

The renowned F-PROT Antivirus engine, originally developed by Fridrik Skulason in 1988, was one of the world's first fully functional, effective antivirus solutions. F-PROT Antivirus, was from the beginning, designed to be reliable, have low resource consumption, a fast detection rate and be easy to use. In addition, F-PROT Antivirus has benefitted from the increased technical know-how and valuable experience gained over the past fifteen years. As a result, the F-PROT Antivirus engine is one of the best search and detection engines available today.

Until 2003, F-PROT Antivirus products were primarily sold via a limited number of large distributors, through OEM agreements, as well as directly via the company's website at [www.f-prot.com](http://www.f-prot.com). Since then, however, the company has broadened its strategy and has built up a global reseller and distributor network alongside a significant expansion of the F-PROT Antivirus product range. FRISK Software now provides antivirus protection for networks of any size, running on a diverse range of platforms.

FRISK Software is a family run company with the husband and wife team of Bjorg Olafsdottir, CEO, and Fridrik Skulason, CTO, at the helm. The company employs over 50 people, including 35-40 technical staff involved in R&D, technical support, testing and the virus laboratory. While the company's headquarters are in Iceland's capital city of Reykjavik, FRISK Software's network of resellers and distributors covers some 60 countries around the world.

### Leading antivirus research and development experts

FRISK Software employs world renowned antivirus research and development experts. Fridrik Skulason, former Technical Editor of Virus Bulletin, is one of the founding members of CARO (Computer AntiVirus Researcher Organization) and, amongst other accolades, was awarded the title of "Icelandic Computer Industry Person of the Century" by the Icelandic Computing Association in the year 2000. Vesselin Bontchev, was honored at the Virus Bulletin 2000 conference as the person who has contributed the most to the antivirus industry over the past 10 years. Other employees such as in the FRISK Software Virus Laboratory, have over 10 years of invaluable experience in the industry, which is considerable in such a young industry.

## The F-PROT Antivirus Product Range

The F-PROT Antivirus family of antivirus and antispam solutions provides comprehensive computer security solutions for the desktop, on the server and at the gateway.

### 1. F-PROT Antivirus Products

The F-PROT Antivirus product range provides high-speed data protection against viruses, worms and other malware as well as including heuristic behavior detection of macro virus threats. F-PROT Antivirus also offers neural network based detection with comprehensive and regular virus signature file updates, providing protection against the many new malicious software threats that emerge every day. F-PROT Antivirus supports a wide range of platforms and can protect computer networks of any size. Millions of individuals, within companies as well as home users, benefit daily from the high-quality protection of F-PROT Antivirus.

- F-PROT Antivirus for Windows
- F-PROT Antivirus for Exchange
- F-PROT Antivirus for UNIX Platforms (e.g. Linux, Solaris, BSD, AIX)
- F-PROT Antivirus for DOS

### 2. F-PROT AVES; E-mail security service

F-PROT AVES is a comprehensive managed antivirus and antispam e-mail security service providing customers with protection against viruses, malicious content and junk e-mail, usually referred to as spam. F-PROT AVES filters all e-mail at the Internet level, blocking malware and other junk before it even reaches the customer's local network. The service allows businesses to significantly reduce bandwidth and storage costs without requiring any additional hardware or software installation. Furthermore, the service can be activated within a single business day.

### 3. F-PROT Antivirus Software Development Kit (SDK)

FRISK Software licenses its F-PROT Antivirus Software Development Kit (SDK), including Application Programming Interface (API) documentation, to interested technology partners. Available for most Windows and Unix based platforms, F-PROT Antivirus SDK is built on the renowned F-PROT Antivirus engine that has been developed continuously over a period of more than fifteen years. F-PROT Antivirus SDKs are easily integrated into technology partners' products, enabling companies to leverage our award-winning technology to enhance their own product range or build their own antivirus solution.

*"I want to tell you and your team how very pleased I am with F-PROT Antivirus. I started to use F-PROT for Windows after I noticed it scanned \*.cab files for viruses, something which other anti-virus software packages failed to do. I have entirely switched to F-PROT because it is easy to use, has a clutterless interface, and works quickly and efficiently. Technical support is characterized by a rapid response time, germane and helpful answers, and courteous and literate wording. I am impressed by the frequency with which F-PROT makes updates available to customers and by its continuing commitment to producing useable and state-of-the-art software."*

*Thank you very much for making this software such a fine product."*

*Craig Werner, Ph.D.  
Snyder, New York, U.S.A.*

*"EIRCOM has been working closely with FRISK Software for over a year now, in the development and launch of Eircom net's extremely successful email protector service. The service is powered by F-PROT AVES anti-virus/antispam technology and maintained by FRISK Software's experts. We have been very pleased with all aspects of this productive cooperation."*

*Aileen Casteloe, Product Manager  
EIRCOM (Irish Telecom), Dublin, Ireland*

## Partners

FRISK Software works closely with a wide range of businesses via a variety of partnership models.

We work closely with channel partners, both distributors and resellers that are authorized to sell our award-winning products worldwide. We have an extensive network that has been growing rapidly over the past few years, with over 200 Channel partners in 60 countries in 2005.

Technology partners include leading corporations that set industry standards as well as innovative organisations that develop and support adjacent technologies. Technology partners include IBM, Microsoft, Sun Microsystems and SUSE Linux.

OEM partners integrate FRISK Software's technologies into their own products, then distribute and sub-license FRISK Software technologies to their customers. OEM Partners include F-Secure Corporation, Authentium Inc., perComp Verlag GmbH, Oy Stinghorn Ltd, Detica Streamshield and FB-4 Inc.

Technology Partners include:

### Key Advantages of Partnering with FRISK Software

- Excellent products with leading antivirus technology
- Good business and profit opportunities
- World renowned antivirus experts
- Leading award-winning antivirus engine
  - Outstanding scanning speed
  - Uses minimal system resources
  - Extraordinary performance
  - Constant, up-to-date antivirus protection
  - Proactive protection against unknown threats
- Small company - fast response to customers / partners requests
- Friendly, well educated, fully trained and motivated employees
- Excellent track record in partnerships / customer relations

## Quality Control and Independent Tests

FRISK Software has strict quality requirements for F-PROT Antivirus products. The products need to pass rigorous inhouse testing in the FRISK Testing Laboratory.

Also, we regularly send F-PROT Antivirus products for testing to the following independent antivirus testing bodies and consistently receive good results.

- Virus Bulletin (UK)
- AV Test (Magdeburg University, Germany)
- AV Comparatives Org (Austria)
- Antivirus Test Center (Hamburg, Germany)
